

DIRECTIONS FOR USE

1. DRAINLINES

Use in sinks, tubs, shower, bath, laundry etc. in sewerred homes or septic tanks. Add 3 to 4 pellets with a cup of water to each problem drain at night. Flush in the morning. If not running clear, repeat procedure.

2. PAN OR HOLDING TANKS

Add 4 to 5 tablespoons to ½ litre of water. Let stand for 30 minutes then add to pan or tank via the toilet. Repeat after emptying each pan or tank.

3. OUTHOUSES

Add a tablespoon to ½ litre of water and wait for the pellets to break down. Empty into outhouse. Keep pile moist at all times. Depending on the number of people using the facility add pellets when needed to reduce smell and accelerate natural occurring bacteria.

4. COMPOSTING

Add a tablespoon to ½ litre of water and wait for pellets to break down. Empty onto compost pile to accelerate composting. Keep pile moist.

5. SEPTIC TANKS

Household

Flush one tablespoon into toilet monthly for general maintenance. Where problems exist add 300g or more to toilet bowl and flush. Repeat if necessary.

Intermittent Usage (Cottages, Holiday Camps, etc)

Fluctuating use of facilities puts a strain on the bacteria essential for degrading and recycling organic wastes. Do an initial dose with approx. 300g to the toilet when first arriving at cottage. Maintain with one tablespoon monthly. If problems noticed increase the frequency of dosage to keep system odour and blockage free.
